

## If a spill occurs:

***Assess personal safety issues and put on necessary protective equipment before addressing spill.***

1. Eliminate source of the spill.
2. Prevent the spill from spreading by diversion or providing a barrier.
3. Do not apply water to clean up a spill as this will cause it to spread.
4. Apply absorbent materials to soak up spilled liquid pesticide or dilute mixtures:
5. Sweep or scoop up dry pesticides
6. Dig up and remove contaminated soil
7. Always read the label for cleaning instructions, as some products have specific requirements.
8. Place spilled pesticide and all collection and cleaning materials in a sealable container or heavy plastic bag, label and dispose of properly.

***Shower, washing thoroughly after cleaning up a pesticide spill.***

# Pesticide Spill Response Kit

## Contents of a Spill Kit:
